Fossil Free Home in Germany

Fossil Free Homes provide examples of how micro actions can contribute to significant progress at the macro level.

Jutta Paulus is one such example of a person who has gotten off fossil fuels in her home.

At home, Jutta has complemented her work by installing a 20 kW solar system on the roof of her house. Jutta also has an electric kitchen and car.

In her day job, Member of the European Parliament MEP Jutta Paulus, from the European Greens, has championed institutional change, pushing for assisting the transition to a fossil free future, by urging leaders to defuse one of the biggest carbon bombs :

The \$21 billion Artic LNG2

Jutta has worked on many issues crucial for the achievement of the European Green Deal, including the addition of maritime transport in the emissions trading system, which is now part of the European Commission's key Fit for 55 climate package.

"When I was 18, a reactor called Chernobyl 4 blew up in the distant Ukraine [...] I started to get involved. The topics of environment and energy have been with me ever since."
